# OnCall Sitter

Android Application

> OnCall Sitter is the Uber of the sitting industry. Through this app, the user can book a sitter for a baby, pet or care aid person instantly and can pay through the app seamlessly. This app provides two-way services one is to the users who will take the service and the other is to the users who will provide the services. Conventionally getting sitter services requires the previous appointment, but through this app you can book instantly and get benefited from this device.

> Over here the Vertical Prototype is built in respect of the users who will take the service. Next goal would be to get some funding for developing all features and making it live and to bring technological innovation and ease in the sitting industry.
